

# DISTANCE/TIME GRAPHS

The distance/time graph to the right shows a journey. Distance/time graphs usually show the distance on the vertical axis and the time on the horizontal axis.

- When an object moves at a constant speed, the graph will be a straight line segment.
- The steepness of a line segment shows the speed of that part of the journey.
- A flat line segment shows that there is no movement. Several different line segments joined together can make up a journey.
