

# QUADRILATERALS

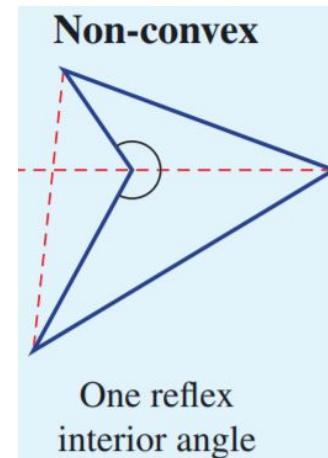

Quadrilaterals are **four-sided** polygons.

# CONVEX and NON-CONVEX QUADRILATERALS

Every quadrilateral has two diagonals. When the diagonals cross each other, we say the quadrilateral is **convex**.

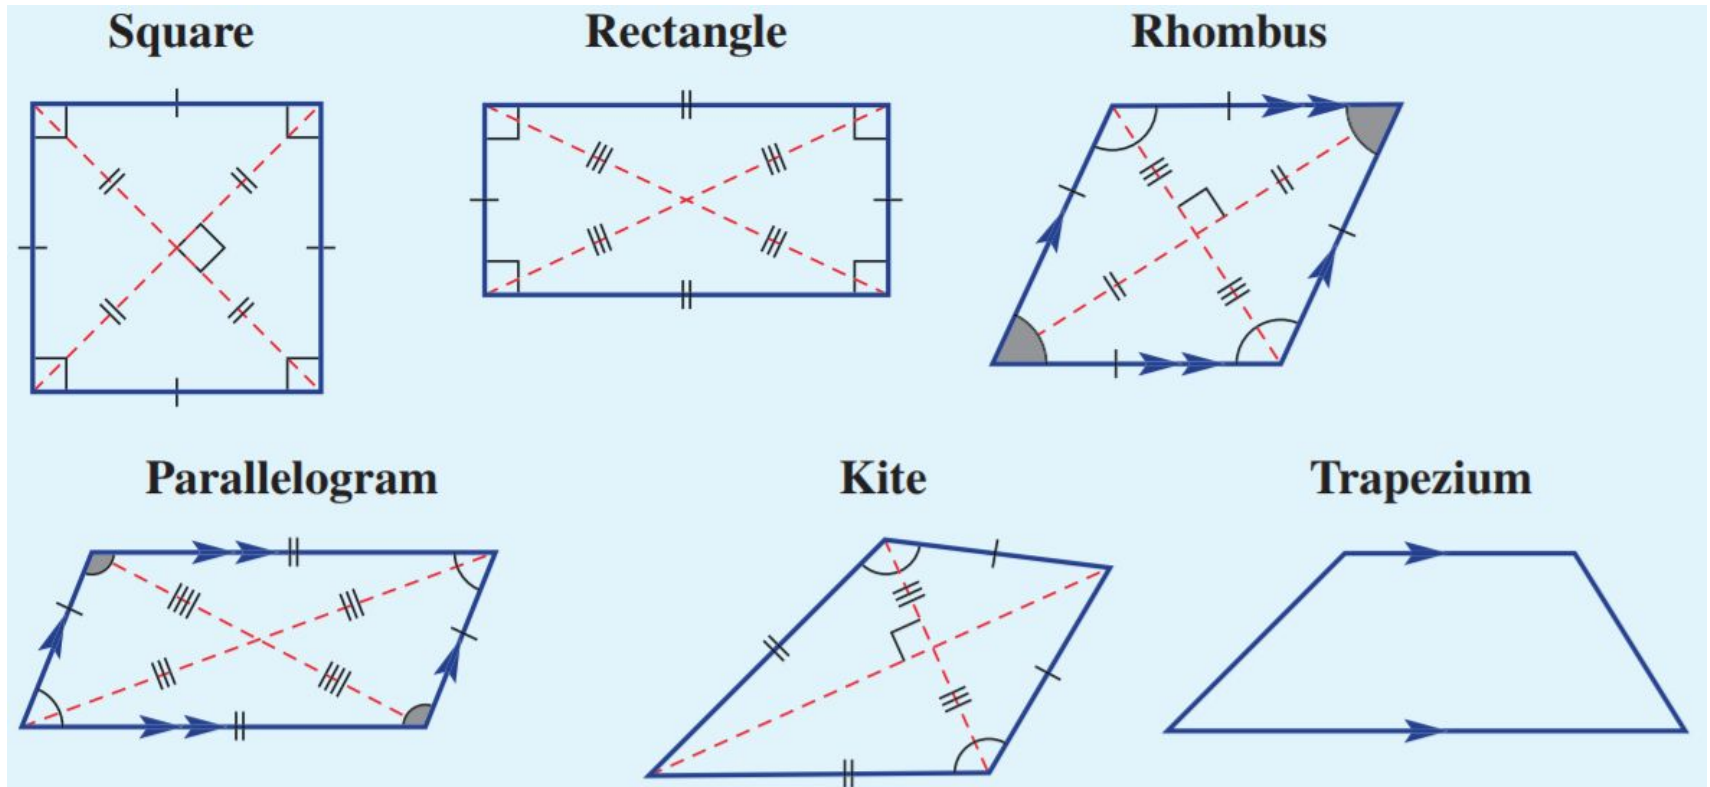

Otherwise the quadrilateral is **non-convex** (or **concave**).

Non-convex quadrilaterals have one vertex pointing inwards.

Both diagonals of convex quadrilaterals lie inside the figure.

# SPECIAL QUADRILATERALS

For the square, rhombus and kite, the diagonals **bisect each other at right angles**.

# ANGLE SUM OF QUADRILATERALS

- The angle sum of any quadrilateral is  $360^\circ$ .

$$a + b + c + d = 360$$
