

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

In this exercise take  $g = 9.8 \text{ m/s}^2$ .

- 1 A ball is thrown at an angle of  $30^\circ$  to the horizontal with an initial speed of  $20 \text{ m/s}$ . Find the initial horizontal and vertical components of the velocity of the ball.

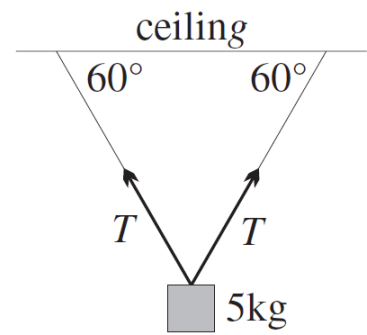

- 2 A particle has initial position vector  $(4\mathbf{i} + 5\mathbf{j})$  metres. It moves with a constant velocity of  $(3\mathbf{i} - 2\mathbf{j}) \text{ m/s}$ . Find its position vector after 7 seconds.

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

- 3 Find the magnitude of the resultant of the forces  $(2\mathbf{i} - 3\mathbf{j})\text{ N}$ ,  $(4\mathbf{i} + \mathbf{j})\text{ N}$  and  $(-3\mathbf{i} + 3\mathbf{j})\text{ N}$ .
- 4 Two forces of magnitude 30 N and 16 N act away from a point  $P$  and are perpendicular. Find the magnitude and direction of the resultant force (measured from the 30 N force correct to the nearest degree).

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

- 6 In the diagram, an object of mass 5 kg is suspended from a horizontal ceiling by two strings of equal length. Each string makes an angle of  $60^\circ$  with the ceiling. Calculate, correct to 3 significant figures, the equal tensions in the two strings.

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

**7** The diagram shows an object of weight 24 N at rest at  $P$  on an inclined plane. Find the component of the weight:

- a** down the plane,
- b** perpendicular to the plane.

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

- 10** A river is flowing at a speed of  $1.5 \text{ m/s}$ . Sam wants to row from point  $A$  on one bank to point  $B$  on the other bank directly opposite  $A$ . He intends to maintain a constant speed of  $2.5 \text{ m/s}$ . In what direction, correct to the nearest degree, should Sam row? Give your answer as an angle of inclination to the line  $AB$ .

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

- 11** Two dogs Brutus and Nitro are simultaneously tugging on a bone. Brutus is pulling with a force of 12 N in a direction  $45^\circ$  west of north, while Nitro is pulling with a force of 16 N in a direction  $30^\circ$  south of east. Calculate, correct to two significant figures, the magnitude and direction of the resultant force.

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

- 12** Three forces act on an object of mass 5 kg. These forces are represented by the vectors  $9\vec{i} - 2\vec{j}$ ,  $-3\vec{i} + 10\vec{j}$  and  $18\vec{i} - \vec{j}$ . Calculate the magnitude and direction of the acceleration of the object.

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

- 13** The position of a plane flying horizontally in a straight line at a constant speed is plotted on a radar screen. One unit on the screen represents 1 km in the air. At 12 noon the position vector of the plane is  $40\mathbf{i} + 16\mathbf{j}$ . Five minutes later its position vector is  $33\mathbf{i} + 40\mathbf{j}$ . Find:
- a** the position vector of the plane at 12:15 pm,
  - b** the velocity of the plane as a vector in km/h.

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

**14** The diagram shows an object of mass 5 kg being raised by forces of magnitude 75 N and 50 N.

- Find the weight of the object.
- Find, correct to the nearest newton, the magnitude of the resultant of the three forces acting on the object.
- Find, correct to the nearest degree, the angle this resultant makes with the upward vertical direction.

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

**16** In the diagram, a flowerpot of mass  $m$  kg is hung from a ceiling by two chains.

Let the tensions in the chains  $AP$  and  $BP$  be  $T_1$  and  $T_2$  newtons respectively.

The third force acting at  $P$  is the weight of the flowerpot.

- a** By finding the horizontal component of the resultant of the three forces acting at  $P$ , show that  $T_1 = \sqrt{3} T_2$ .
- b** By finding the vertical component of the resultant of the three forces acting at  $P$ , show that  $\sqrt{3} T_1 + T_2 = 19.6m$  newtons.
- c** Find the mass of the flowerpot, given that  $T_2 = 98$  N.

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

**17** The diagram shows objects of mass 3 kg and  $m$  kg attached to the ends of a light inextensible string that passes over a smooth pulley. The 3 kg object is accelerating at  $4.9 \text{ m/s}^2$  upwards. Let the tension in the string be  $T$  newtons.

- a** Find the value of  $T$ .
- b** Find the value of  $m$ .

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

- 18** Two forces, of magnitude  $p$  newtons and  $q$  newtons, have a resultant of  $2\sqrt{7}$  N when they act at  $90^\circ$  to each other. When they act at  $30^\circ$  to each other, however, the magnitude of the resultant is  $2\sqrt{13}$  N. Find the values of  $p$  and  $q$ .

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

**19** The diagram shows objects of mass 3 kg and 2 kg on connected smooth planes inclined at angles of  $\theta$  and  $2\theta$  to the horizontal. The objects are attached to the ends of a light inextensible string that passes over a smooth pulley. Let  $T$  newtons be the tension in the string, and suppose that the 3 kg object is accelerating at  $a \text{ m/s}^2$  up its plane.

- a** Find, in terms of  $a$ ,  $T$ ,  $g$  and  $\theta$ , an equation for the motion of the 3 kg object up its plane.
- b** Write down a similar equation for the motion of the 2 kg object down the other plane.
- c** Show that the system is in equilibrium when  $\cos \theta = \frac{3}{4}$ .

## APPLICATIONS TO PHYSICAL SITUATIONS (from CAMBRIDGE)

**20** In the diagram, objects of mass  $m_1$  and  $m_2$  are held at rest on adjoining smooth inclined planes. They are connected by a light inextensible string that passes over a smooth pulley.

**a** Show that when the objects are released, the object of mass  $m_1$  will accelerate *towards the pulley* if  $m_1 < \sqrt{3} m_2$ .

**b** Assuming that the condition in part **a** is satisfied, show that the object of mass  $m_1$  will hit the pulley

with speed  $\sqrt{\frac{dg(\sqrt{3}m_2 - m_1)}{m_1 + m_2}}$ .
